

# Army JROTC Cyber Modules

CYBER.ORG  
THE ACADEMIC INITIATIVE OF THE CYBER INNOVATION CENTER

CYBER.ORG and Army JROTC have partnered up to provide content for JROTC instructors as they introduce students to the business, legal, and technological implications of the cyber society we live in.

The Army JROTC Cyber modules are from CYBER.ORG's Cyber Society course and are designed to introduce humanity-based concepts to increase cyber awareness among high school students to feed the cyber workforce pipeline.

## What You'll Teach

### Law

This module explores the differences between a criminal offense and a moral wrong, protection of intellectual property, the functions and uses of permanent electronic records, and the role of laws in addressing social challenges.

#### *Lessons*

- Technology and Criminal Law
- Intellectual Property
- Your Permanent Electronic Record
- Privacy vs. Security
- Culminating Activity

### Business

This module demonstrates the collection, storage, usage, and protection of data; cybersecurity attacks and threats; and technology to improve information security.

#### *Lessons*

- Business in a Digital Age
- You Are The Data

### Artificial Intelligence

This module introduces a definition of "smart" technology, examines the concept of intelligence, and explores the current, and potential future, roles of AI around the globe.

#### *Lessons*

- National Defense and AI
